Source of Water _____

Pints of _____ % chlorine in _____ gallons of water

Operator's Signature _____

Date _____ DOH-1323 CCHD Version 4/08

Swimming Pool Disinfection Instructions

- 1 The swimming pool disinfectant residual must be checked at least three times (3x) a day, especially before and after periods of heavy bathing.
- 2 The minimum disinfectant residuals to properly disinfect a pool are stated in Section 6-1.11(c) in Subpart 6-1 of the New York State Sanitary Code. Spa disinfectant residuals are stated in Section 6-1.25(c). A summary of the chlorine/bromine residuals is as follows:

For a pH range of 7.2 - 7.8:

For chlorine:

minimum concentration of .6 mg/L free chlorine residuals (spas - 1.5 mg/L free chlorine residual);
maximum concentration of 5 mg/L free chlorine residual.

For bromine:

minimum concentration of 1.5 mg/L bromine residual (spas - 3.0 mg/L);
maximum concentration of 6 mg/L bromine residual.

For a pH range of 7.8 - 8.2:

minimum concentration of 1.5 mg/L free chlorine residual;
maximum concentration of 5 mg/L free chlorine residual.

Use of chlorine compounds containing cyanuric acid is not acceptable.

Chlorine and bromine levels must be measured by the DPD method.

- 3 The chlorine sample should be taken between the pool inlet and outlet, at approximately a 12 inch depth.
- 4 Note in the remarks column any unusual circumstances; i.e. pool closure, pump failure, reason for pump and filter not operating, testing of ground fault interrupter, if applicable, and cloudiness of pool water, etc.
- 5 The county or district health department must be immediately notified of any change in equipment, interruption in treatment, loss of water clarity, or serious injury.
